Terminal Architect Editor: Software tool creator for app schema for mobile devices

Develop your application as easy as if you played lego! TERMINAL-ARCHITECT-EDITOR is software tool creator for application schema launchable on a mobile computer. The hosting OS for the editor must be Windows.

- Editor allows you to create any amount of schema´s sets.
- Each set of which can contain any amount of timer schedules, data sending to a TCP / IP server, message, etc.
- More than 60 different types of objects can be used in the schemas to perform a specific operation(retrieving database data, writing to TXT / CSV / XLS / file, displaying user menu or form, writing to the serial port, ...), which can be arbitrarily interconnected and create schema functionality. Further is several types of startup objects are available that determine the way the schema is processed (application, timer, TCP / IP server, etc.).
- Schemes are for Windows XP / Vista / 7 / 8.x / 10 and for devices running WindowsCE and WindowsMobile.
