

Calibration/Recalibration & Prophylaxis of Printronix printer with validator

Preventive inspection of equipment, usually involving complete cleaning, adjustment and inspection of the printer; then recalibration of the built-in barcode validator.

Standard prophylaxis is followed by recalibration of the validator to ISO values.

We provide the offered service:

- in CODEWARE (the customer sends the printer, transportation fee is not included in the price of the service) - we prefer printers without an installed barcode validator, we have the technical background in house and, if necessary, we can immediately replace a defective part
- at the customer's site (with additional payment for transportation) - necessary for a printer with a built-in validator

Providing the service takes four hours.
