

Creating / editing a template for CipherLab CPT-8xxx terminals

Creating an application for the 8000, 8200, 8300 or 8600 series portable CipherLab terminal, or modifying an existing application. We can provide the service via internet or at the customer's workplace (with a surcharge for transport).

The offered service package includes:

- initial consultation about the required functionality with the customer (menu and form structure)
- setting the types of scanned codes
- connecting the forms to a list in the device memory (eg. to a table of products) to display information on the screen
- sending the prepared list to the terminal (specifying which application can be used)
- transfer of collected data from the terminal to the computer disk (specification of which application can be used)
- consultation of firmware modification in case of need to use non-standard functionality (programming of such assignment itself is not the part of this package)
