Terminal Architect Mobile: runtime app runs schemas created by the Terminal Architect Editor for mobile devices

Develop your application as easy as if you played lego! TERMINAL-ARCHITECT-MOBILE is an app for mobile computer, which runs schemas previously created by the Terminal Architect Editor.

- Editor allows you to create any amount of schema´s sets.
- Each set of which can contain any amount of timer schedules, data sending to a TCP / IP server, message, etc.
- More than 60 different types of objects can be used in the schemas to perform a specific operation(retrieving database data, writing to TXT / CSV / XLS / file, displaying user menu or form, writing to the serial port, ...), which can be arbitrarily interconnected and create schema functionality. Further is several types of startup objects are available that determine the way the schema is processed (application, timer, TCP / IP server, etc.).
- Schemes are for Windows XP / Vista / 7 / 8.x / 10 and for devices running WindowsCE and WindowsMobile.

Technical Description

Functionality & Operation	
Operating system	Microsoft Windows CE.NET, Microsoft Windows Embedded Handheld Professional and Classic, Microsoft Windows Mobile Professional, Windows Mobile, Windows® Embedded Compact, Windows® Embedded Handheld
Others	
Bundled Accessories	USB key, quick start guide
