

UN-215 Universal Labels Rewinder

Universal label rewinder made in Czech Republic. It serves for rewinding up the label strip from some kind of the barcode thermal or thermotransfer printer. Maximal label width is 108 mm, maximal roll diameter is 200 mm. Speed of the label rewinder is 125 mm/s or 250 mm/s (all depends on model).

The UN series external winders are designed to complement label printers roll-fed labels. The labels are wound directly onto the mandrel or onto a 40mm cavity attached to the mandrel with an L-shaped clamp (optional accessory) or to the cavity 76mm attached with a reducer (optional accessory). Can then be fed into label applicators, automatic label applicators and similar devices. The rollers are of all-metal construction. Models UN-115/215/220 wind via a friction clutch with adjustable tension torque.

Technical Description

Functionality & Operation

200mm

2 ot./ s

Print speed

250mm/sec (10 ips)

Electrical

Power Source

Adapter 220V 50Hz, 15 VAC

Mechanical

Weight

4.2kg

Dimensions

Width: 222mm, Height: 200mm Length: 268mm
